

Modar Abdallah

Software Engineer

Profile

Software Engineer expert in building end-to-end applications with **React, Next.js and Django**. Specialized in leveraging **Data Analysis** to optimize technical decisions and developing **AI-integrated systems** for enhanced automation. Currently focused on scaling infrastructures through **Cloud-native practices** to deliver secure, data-driven and high performance solutions.

Skills

- **Full-Stack Development:**
 - Frontend: React, Next.js, Tailwind.
 - Backend: Django/Python, Laravel/PHP.
 - APIs: RESTful API Design, Authentication (OAuth2, sanctum).
- **Data & AI:**
 - Data Analysis: SQL(MySQL), Python (Pandas, NumPy), Data Visualization
 - AI Implementation: LLM Integration, Custom chatbot Development.
- **Cloud & DevOps:**
 - Cloud Platforms: Microsoft Azure
 - Tools: Docker (Containerization), Git/GitHub, Linux Administration.
- **Security & Logic:**
 - Cryptography: Implementation of Classic & Modern Ciphers
 - Best Practices: Web Security, Database Optimization, Query Tuning

Education

- Fifth year at Lattakia University (Software Engineering)
- Educated From LAC Institution for English language

Professional Experience:

- Front-End Developer (Freelancer)
- Back-End Developer (Freelancer)
- Office Editor (Freelancer)
- Lecture Writer for Gate library (2023 -> Now)

Languages

- Arabic(C1)
- English(B2)
- French (A2)
- German (A1)

Technical Projects:

1.Geospatial Navigation Engine:

- Designed and deployed a web application for geospatial visualization and route optimization.
- Built custom logic to map routes from the user's origin to specific coordinates, incorporating real-time distance and timing metrics.
- Developed a parking module that visualizes nearby facilities and provides seamless navigation between selected waypoints.

2. Vortex Market

- Developed a scalable multi-vendor marketplace using React and Django, implementing a role-based access control system to distinguish between **Administrative** management and **User** experience.

- **Refined backend efficiency** by modernizing database connection methodologies and implementing secure API structures to handle concurrent user requests effectively.
